

A multi-centre prospective audit investigating the incidence, contemporary management and outcomes of vascular trauma in the UK

Background

Vascular trauma kills and can devastate the lives of those who survive.

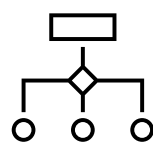

Its management is heterogenous and detailed outcome data are currently not available.

Aims

For patients with vascular trauma:

1. Understand demographics
2. Characterise patterns of injury
3. Establish current management strategies + rationale for choice
4. Describe patient outcomes

Methods

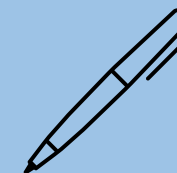

All UK Major Trauma Centres (MTCs) invited to participate.

Consecutive patients (adults + children) with radiologically or surgically proven vascular trauma.

Six-month patient enrolment period:

- **Opens 1st March 2022**
- **Closes 1st September 2022**

Data collection via REDCap.

Sign up

All UK MTCs invited to take part:

- **Surgical consultant** lead
- **Surgical (vascular or trauma interested) and radiology trainee** contributors

Study opens on **1st March 2022**

Collaborative authorship
for all participants
