

TRAUMA CARE DOESN'T STOP AT THE ED DOORS. WHY SHOULD TRAUMA EDUCATION?

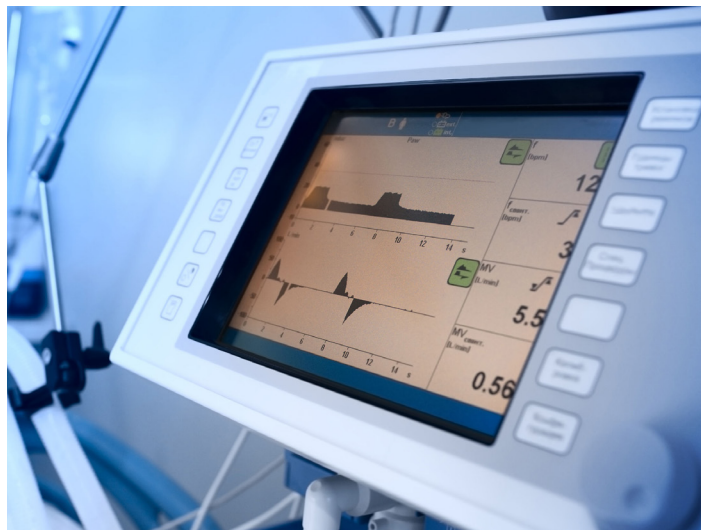

Programme Description

Unlike trauma education programmes targeted at prehospital and emergency care providers, the Trauma Care After Resuscitation (TCAR) course is specifically designed for acute care, critical care, ward, and perioperative nurses. The course will also appeal to other health professionals working in trauma settings.

This live, 2-day programme gives inpatient staff members the foundational, evidence-based information and critical thinking skills necessary to meet regulatory requirements and provide excellent care to this challenging patient population.

THIS COURSE WILL PROVIDE A THEORETICAL BASIS FOR THE TRAUMA WARD-BASED COMPETENCIES

Programme Overview

PART 1

Participants focus on concepts relevant to the care of the injured, hospitalized patient:

- The trauma care spectrum
- The biomechanics of trauma
- The body's response to injury

PART 2

Learners apply information from Part 1 by participating in interactive expanding case scenarios that focus on admission-to-discharge care of patients with injuries to various body regions. Cases include the surgical, medical, and nursing management of patients with:

- Thoracic trauma
- Abdominal trauma
- Musculoskeletal trauma
- Head trauma
- Spine & spinal cord trauma
